

Critical Reflection Essay

In this essay, I will reflect on the design process of my commercial website, exploring the global economic and artistic implications of the web technologies and design techniques employed. I will discuss the design decisions concerning the user interface (UI), user experience (UX), and data visualisations. I will also address how I have harnessed the interactive nature of the web to optimise the user experience on my site. Finally, I will consider how my project aligns with professional practices on a global scale. This reflection process will give me critical insight into the educational journey I have undergone through the website's development.
